

Ante Braović

Summary:

I am a web software architect and an engineer for 15 years. I have been working with PHP, and for last 11 years I have been using Symfony Framework. Also, I have been designing databases and working with relational databases including MySQL and MSSQL. I have been working with an in-memory database Redis. For the last 9 years I have been working with Docker including AWS ECS and standalone containers on Linux. For four I have been working with react.js.

My passion is building highly scalable and performance efficient web systems. I enjoy converting ideas into functional projects, improving everyday tasks and making things easier for people through software. I like working as part of a team and exchange ideas with other developers, especially ones that are using other technologies and approaches to widen my views on solving problems.

Experience:

10/2010 – Present Freelance web software architect and engineer

Working for various foreign and domestic clients on custom software solutions with highest interest in highly scalable architecture.

My responsibilities:

- Creating database and system architecture
- Building scalable apps using PHP and MySQL
- Building custom APIs
- Processing data from external APIs
- Developing applications using PHP, MySQL and JS
- Working as part of team
- Leading the team
- Leading multiple projects
- Communicating with clients
- Maintaining Linux servers (dedicated, VPS, AWS)

02/2021 – Present Lead web architect and engineer (ScanEat Ltd.)

By scanning the barcode of a food product, find out all the information about its ingredients and nutrients and quickly and easily check whether the product is safe for you.

I was a part of team which included six developers.

My responsibilities:

- Leading database and backend system architecture
- Developed complete backend system, including API for mobile applications
- Developed React.js based administration
- Deployment and maintaining the system on AWS using EC2 and RDS

10/2015 – Present Lead web architect and engineer (Jealousy Ltd.)

Working on creation of a brand-new social network from scratch called Jealousy. Jealousy is new social network with completely different mindset and completely new user experience (UX) that is never seen on mobile devices.

I was a part of a small team which included three developers. We created a new social network available for iOS and Android platform.

My responsibilities:

- Leading database and backend system architecture
- Developed complete backend system, including API for mobile applications
- Deployment and maintaining the system on AWS using ECS

10/2012 – 09/2015 Web software engineer and Head of development (Profico)

Senior web developer and Head of the development department in one of the fast-growing Croatian IT company.

Working on various projects like IMC traveling system, Allianz Croatia (in-house application), Mobile TV, etc.

My responsibilities:

- Creating use cases and mock-ups for application features;
- Creating the database architecture;
- Creating an application architecture;
- Developing applications using PHP, MySQL and JS;
- Working as part of team
- Leading the team
- Leading multiple projects
- Communicating with clients
- Maintaining Linux servers (dedicated, VPS, AWS)

03/2014 – Present Part-time Lecturer at Faculty of Electrical Engineering, Mechanical Engineering and Naval Architecture, University of Split

- Working as an assistant professor

Giving classes in programming and object-oriented programming course in C and C++.

Education:

2011 – 2013

Master of Science in Computing at Faculty of Electrical Engineering, Mechanical Engineering and Naval Architecture, University of Split

2008 – 2011

Bachelor's in Computing at Faculty of Electrical Engineering, Mechanical Engineering and Naval Architecture, University of Split

Languages:

English, Croatian
